

Coding Exercise – Book Reading Status

- Write a JavaScript program to display the reading status of books.
 1. Create an array `eBooks` and add three objects to this array.
 2. Each object should contain `title`, `author` and `readingStatus` properties and assign them some values. For Example, `title: "PHP for Absolute Beginners"`, `author: "Jason Lengstorf"`, `readingStatus: false`
 3. Loop through array elements and find the reading status of each book object.
 4. Display the reading status of each book object using `document.write`.
