# Coding Exercise - Write a Simple JavaScript Program

Please perform below steps:

1. Create an exercise folder.
2. Create HTML file (i.e. ***index.html)*** with basic standard HTML template and save it inside the exercise folder.
3. Add `script` tag just before the `body` closing tag as demonstrated in lecture.
4. The `script` tag should point to an external JavaScript file (i.e. ***myScript.js)*** using `src` attribute.
5. Create an external JavaScript file (i.e. ***myScript.js)*** and save it inside exercise folder.
6. Open external JavaScript file and start writing JavaScript statements.
7. Add JavaScript statement to popup your name using `alert` method.
8. Save file and insure the browser output.

Browser Output:

9) Now comment out `alert` statement using single line comment.

10) Write/Output your name using `document.write` statement.

11) Save file and insure the browser output.

Browser Output:
